

“OUR HYDRO-FORCE PRE-RINSE SYSTEMS PERFORM MUNDANE TASKS EFFICIENTLY & AUTOMATICALLY”

COMPLIES WITH AAMI RECOMMENDATIONS

TBJ'S INTEGRATED HYDRO-FORCE PRE-RINSE SYSTEM GREATLY REDUCES MANUAL PRE-TREATMENT OF SOILED INSTRUMENTS

Our Hydro-Force Pre-Treatment rinse System is integrated into our reprocessing sinks and is designed to provide maximum efficiency during the pre-treatment and reprocessing stages of instrument decontamination.

The Hydro-Force Pre-Treatment Rinse is a programmable cycle that provides a continuous recirculating rinse that significantly reduces gross debris and bio-burden from instruments and devices automatically.

Initial manual cleaning is greatly reduced, aerosols are minimized and instruments are pre-treated under water as recommended by AAMI guidelines.

How Does It work?

The Hydro-Force system provides a combination of constantly rolling recirculated water with optional enzymatic solutions to provide a gentle turbulence to effectively pre-treat and remove gross debris right in the sink bowl.....automatically.

Additional Unique TBJ Sink Options

- Push-button sink filling
- Heated sink bowls
- Integrated ultrasonic sink bowls
- Push-button height adjustment
- Many more standard and custom options

Contact TBJ today for a custom SPD work sink consultation. Let us help you design sink tailored around your specific needs.
