

“DO YOUR SPD DECONTAM SINKS & WORKSTATIONS HAVE YOUR BACK?”

OSHA WORKSTATION ALERT

TBJ'S SPD DECONTAMINATION WORK SURFACES ARE HEIGHT ADJUSTABLE TO REDUCE LOWER BACK INJURIES

Our Stainless Steel Decontam Work Stations are ergonomically designed to provide human comforts during the critical pre-treatment and reprocessing of instruments. All of the accessories we offer, including height adjustment and custom processing fixtures, are specifically engineered to equip your staff with the tools they need to safely, comfortably and effectively prepare instruments and devices for the next step in the decontamination process.

According to OSHA, “Back disorders can develop gradually as a result of microtrauma brought about by repetitive activity over time.”

TBJ height adjustable decontam work sinks are available with extra large bowls that are spacious enough to allow easy access and complete immersion of entire instrument trays as recommended by AAMI standards.

Optional accessories can be added to any station, such as our unique “Jet Pistol” spray gun fixture which utilizes water or compressed air. It is ideal for cleaning items such as:

- Cannulae • Endoscopes • Cystoscopes • Syringes
- Catheters • Pipettes • Laboratory Glassware

...and many other instruments and accessories.

Additional Work Sink Options Include:

- Integrated Ultrasonic Tanks
- Hands-Free Foot Pedal Controls
- External Lever Handle Drain Control
- Pre-Rinse Fixtures
- DI / Distilled Water Fixtures
- Adjustable Safety Splash Shields

Contact TBJ Today for a custom SPD workstation consultation. Let us help you design a tailored decontam work system that meets all of your needs.
